

Advanced Email Hosting and Filtering

cleanaddress

cleanaddress is the ideal email solution for customers who want an email address that is free from viruses and spam whilst being easy to administer, value for money and reliable. With our service, you receive as many email addresses as you need @larrytechmail.co.uk. You can use these addresses as your primary email address, or forward mail from another mail account.

cleanaddress offers a range of innovative features over many traditional email systems. What's more you can choose between all optional extras to create a custom package that's right for you.

Use Your Own Domain

If you have your own personal domain name, you can use it with **cleanaddress** free of charge. For example, if own the domain name mydomain.com, you can have anything@mydomain.com come to your **cleanaddress** account. Ideal for businesses and those wanting a personalised service. No more hard-to-remember usernames! We'll give you full information on how to do it. *[Included in all accounts]*

Spam Filter - Effective removal of junk and obscene emails

Make the daily flood of spam a thing of the past with our free spam filtering. Choose between a range of sensitivity settings and control how spam is handled. An online (or IMAP accessible) spam quarantine allows you to keep check on what is being caught. We can't promise to get every spam that comes through (and neither can anyone else, despite their claims), but you can expect to spam to become an occasional surprise rather than a daily menace. *[Included in all accounts]*

White & Black Lists - Exact control over who can send to your mailbox

Got on a mailing list you can't get out of? Our blacklist can ensure that they can no longer get through. Likewise, whitelists ensure that an address is not subjected to our spam filters. *[Included in all accounts]*

Virus Filter - No more worms, trojans or other nasties

Our powerful virus filters, supplied by Kaspersky offer full protection against email viruses. What's more our outbound (SMTP) delivery servers will scan your email for viruses as well. We update our detection capabilities every 15 minutes. *[Optional Extra]*

POP3 & IMAP Support - The power of IMAP makes it ideal for business

cleanaddress is not a web-only service, POP3 is included in all accounts so you can use it with all

popular email clients. We also offer IMAP - the ability to keep messages centrally and use server-based folders. IMAP allows you to run several email clients (laptop, PDA etc) and always see the same identical mailbox. *[POP3 Included - IMAP Optional Extra]*

Multiple Mailboxes, Central Admin - Easy administration, instant results

Whether one mailbox or one thousand, you can manage all your mailboxes centrally or individually with our web-based control panel. If the account is for business, your end-users can log in to set options such as AutoReply but cannot see their peers. The central admin account can control all mailboxes. Everything is instant; there is no need to contact us for setups. *[Included in all accounts]*

Outbound SMTP - Safe delivery of email and optional virus protection

Unlike some email providers, you can use our servers to deliver email. Our high-performance server farms ensure fast delivery. What's more, if you take the Virus Filter option, we'll scan your outbound mail at no extra charge. *[Included in all accounts]*

Free Mail Tools - AutoReply, FetchMail, Aliases, Forwarding

All **cleanaddress** accounts come with a range of useful tools:

- AutoReply - Also known as 'Out Of Office'. Set up an email to be automatically sent to anyone contacting you while you are away.
- FetchMail - We're sure that after using **cleanaddress** you won't want to use any other service. FetchMail allows us to collect email on your behalf from other email accounts. One central email account for all your addresses!
- Aliases - You can have any number of aliases on your account. These are addresses that 'map' to a real mailbox. So, sales@ or info@ need not take up mailboxes. You can even have an alias delivered to more than one mailbox, creating mailing lists.
- Forwarding - Need mail in another place? If you can't get to your **cleanaddress** account, or maybe you need a copy at work, **cleanaddress** can copy or move email to an external address.

[Included in all accounts]

Pricing

Pricing is simple! Prices shown are per month. There is a monthly minimum charge of £5. However, if you choose to pay annually in advance, we'll give you two months free.

Example: 5 mailboxes with 200Mb quota, IMAP and anti-virus.

= 5 x (£0.20 + (0.2 x £2.00) + £0.30 + £0.30)

= £6.00 per month

**i.e. just under 17p per day
for 5 users (paid annually)**

Service	Price (£ per month)
POP3 Mailbox (includes Anti-Spam)	£0.20
IMAP Access	£0.30
Quota (per GB)	£2.00
Anti-Virus (per Mailbox)	£0.30

cleanmail

cleanmail is perfect for customers who want their email filtered for spam and viruses before being processed by their existing mail server or web host.

Normally emails are delivered directly to your SMTP server (e.g. Exchange). With the **cleanmail** service, your email is delivered to our data centre first. These systems detect spam and virus-infected email and remove or tag them (your choice). We then deliver the email to your server as normal.

This service requires no new hardware, software, training or maintenance. The only required outlay is our license fee, which you will find to be extremely competitive.

Spam Protection from SpamAssassin

No mystical proprietary systems here. We have chosen SpamAssassin as the best defence against spam. SpamAssassin is a community-developed open source project that has lead the field in the fight against spam. We are a proud part of this community.

Virus Protection from Kaspersky Labs

Kaspersky have developed an excellent unix-based implementation of their award-winning anti-virus software. It's performance and accuracy make it an ideal partner for **cleanmail**.

One-Time Configuration

Once **cleanmail** is set up, you need do nothing. We handle all updates for you, making sure you have the latest protection available. No monitoring or maintenance is required.

Control Panel

We offer a range of options so that we handle rogue emails the way you want us to. Want the spam delivered with a tag? Fine. Want it deleted? Fine. There are a range of options at your disposal. We also provide a range of useful diagnostics that you can use to test the system.

Feature List:

- Filter detects spam and virus-infected email and forwards 'clean' email to a server of your choosing
- Supports up to 50 different domain names at no extra cost
- Online server testing to ensure integrity of connection
- View inbound queue online
- View quarantined spam online
- One-click 'restore' spam to filter queue
- Option to disable anti-virus and/or spam protection
- Option to disable virus notifications
- 4 Different protection levels for spam

- Quarantine spam or add static tag for local filtering
- Email support
- Blacklist and Whitelist facilities

Benefits

Wondering how adopting **cleanmail** can help your business? Here's what our customers get:

- **Impact on Business** - Spam and viruses cost businesses money. A rogue email could down your systems, offend a customer or cause a delay that means an urgent order or support request never gets through.
- **Time** - Your technical support team are no longer wasting time dealing with internal complaints about spam and diagnosing problems caused by viruses. They're doing what you want them to do.
- **Reliability** - Here's an example: One email server we were monitoring built up a queue of 50,000 emails sending bounce notifications (rejections) to addresses that didn't exist! These were responses to spam that had been sent to random addresses. The resulting load delayed outbound emails by hours causing inconvenience to employees and customers.
- **No Hassle** - Sure you could get your own solution built in house, but consider this: You'll need a server, subscription-based software and a lot of time installing, configuring and testing. Plus, you'll have to maintain it. With **cleanmail**, the viruses never get to your network in the first place. We've done all the work for you and it's a fraction of the cost to implement.
- **Data Integrity** - Viruses and worms are there to cause trouble. Even so-called 'benign' worms can contain bugs that could cause your computer to crash, losing data.
- **Peace of Mind** - Most of all, you can stop worrying!

Pricing

Prices are based on the number of people with mailboxes on the destination server. Prices shown are per month. We do not charge for alias addresses such as 'sales@' or 'info@', so don't add them. We also don't consider name aliases as multiple users. The rule of thumb is 1 person = 1 license. The minimum amount of users permitted is 5. User licenses are sold in blocks of 5, so any numbers between will be rounded up.

Service	5 – 49 Users	50 – 99 Users	100 – 199 Users	200+ Users
User Account (includes 100MB quota)	£5.99	£5.99	£5.99	£5.99
SMTP User (includes IMAP/POP3/Anti-Spam)	£0.60	£0.50	£0.40	£0.30
Quota (per GB)	£6.00	£6.00	£6.00	£6.00
Anti-Virus (per User)	£0.60	£0.50	£0.40	£0.30

Example: 5 users with 100Mb quota and anti-virus.

$$= £5.99 + (5 \times (£0.60 + £0.60))$$

$$= £11.99 \text{ per month}$$

Protection for 5 users for less than 8p per user per day!

Example: 300 users with 1Gb quota and anti-virus.

$$= £5.99 + £6.00 (300 \times (£0.30 + £0.30))$$

$$= £191.99 \text{ per month}$$

Protection for 300 users for Just over 2p per user per day!
